

Read this text and answer the following Multiple Choice Questions (MCQ) tasks.

Beware: all correct answer is 0.5 pt whereas all incorrect answer is – 0.5 pt.

Speech and language abnormalities⁽¹⁾ are associated with communication problems and violation of the sound-articulation features of a person's speech. Breaches⁽²⁾ of this type that are of a biological nature are known as speech-language pathologies. Speech and language disorders are explored by the science of speech therapy.

The term logopedics (from logos, speech, and paideia-education) means science of speech disorders and methods of their prevention, diagnosis, overcoming, social rehabilitation of children and persons with speech and speech disorders. The Subject and focus⁽³⁾ of speech therapy are the regularities and peculiarities in the occurrence and development of speech disorders and the main processes of correction and rehabilitation of speech functions. In the scope of logopedics are children from preschool and school age as well as adults with abnormal speech status. The main aim of speech therapy is to develop and implement scientifically proven and practically verified methods of speech prevention and treatment of speech pathologies through specialized systems for education, education and socialization of speech pathologists⁽⁴⁾.
